LED Lighting Retrofit and Replacement Solutions

MADISON **LED**

Energy Efficient LED Lighting

LED lighting provides significantly safer and more environmentally-friendly lighting than HID or fluorescents. If you are concerned about clean, low cost, low maintenance, low-hazard, high-quality lighting solutions, LED is the optimal way to go. Here are some of the reasons why:

Best lighting option for the environment

LEDs can use as much as 60% less electricity than other types of fixtures and are 100% recyclable. Because they contain no mercury, LEDs do not create the environmental hazards inherent in the production, disposal, and accidental breakage of fluorescents.

Cost effective.

LEDs use less energy to operate, and they reduce the energy required for environmental controls at your facility, thus saving on power costs. In addition, many states offer great incentives.

Better quality of light

LEDs provide high-visibility and consistent bright light with minimal heat output.

Long life with minimal degradation, virtually no maintenance

With a life span of up to 10-years or over 80,000 hours, LEDs require virtually no maintenance. They produce steady light output with less than 1% degradation annually over the life of the product.

Safer, healthier and more productive workplace

By providing better quality and color of light and enhancing visibility, LEDs increase productivity, worker satisfaction and workplace health and safety.

Eco-Insight - LED Audit Software

Madison Energy uses a custom software with numerous functions that allows for a thorough and accurate audit of any facility. The software uploads the audit information to our lighting specialists who review the information and then construct a detailed proposal.

Our Eco-Insight software also allows for pictures and even audio/video to be taken to ensure we have all the information we need to return a timely, accurate, and effective proposal.
